

# Dopharma and RIPAC-LABOR join forces

As a part of Dopharma’s mission to “Healthy Livestock” the family owned Dutch company extended their efforts in providing diagnostics and vaccines for livestock by acquiring shares in the German family owned company RIPAC-LABOR, specialist in the development and production of autogenous vaccines.

Where Dopharma has affiliates in Belgium, Germany, Romania and Lithuania and an extensive network of exclusive partners in over 50 countries, RIPAC-LABOR has a vast expertise in diagnostics and the production of autogenous vaccines. Dopharma and RIPAC-LABOR bring together their expertise in order to provide tailor made solutions with a pragmatic and cost efficient approach to European veterinarians.

In a comment Dopharma’s General Manager External Affairs Wijnand de Bruijn stated: “We are very pleased to announce this co-operation. For several years Dopharma has been looking for the right partner to extend our product portfolio with (autogenous) vaccines. Working close to customers and using our knowledge to improve livestock health is what we aim for. The ability to offer diagnostics together with autogenous vaccines is a unique opportunity that contributes to our mission.”

Dagmar Köhler-Repp, owner and Managing Director of RIPAC-LABOR explains: “In the past few years more and more international customers found their way to RIPAC-LABOR. In order to make them benefit from our expertise and to provide them with extensive services, we needed a partner with international focus and experience. We are very pleased to combine our knowledge with the international experience Dopharma has to offer.”
